### ABSTRACT

This article develops scientific conclusions and recommendations for radical reforms in the field of public procurement, the role of this system in the targeted and rational use of state budget funds, as well as more effective organization of public procurement in our country.

### KEYWORDS

Public procurement, special information portal, procurement procedures, budget, state budget.

### INTRODUCTION

The state budget is the centralized money of the state, which reflects the sources of income and income from them, the amount and direction of expenditure. As an integral part of state expenditures, together with state purchases, it is considered one of the main tools for the implementation of the state's tasks and functions.

It is necessary for the state to perform the tasks necessary for the performance of the tasks assigned to it. Of course, attention is paid to public procurement. Purchases of the budgets of the state budget system are purchases of products, works and services. In other words, state purchases - goods (works, services) are

purchased by state customers on a power basis. It is necessary to perform tasks in full understanding of the nature of public procurement. It is possible to support the development of a service that can implement these tasks and social changes in social security. States can purchase market elements, distribute inspection routes and increase efficiency. And putting it under the control of public procurement requires it and its direction, in which it is necessary. In our republic, a large amount of corrections is given to work for the purpose of formation and improvement of the state procurement system. In particular, the Cabinet of Ministers "Organization of procurement procedures and procedures in the implementation of public procurements in the case of the use of information and communication technologies.

"improved management measures" are actively monitored.

He encountered problems with the work "Government Procurement".

- By April 1, 2021, the creation of a separate page on a special information portal, providing for the electronic transfer of public procurement in the field of construction;
- By May 1, 2021, development of technical project documents for the creation of the Central Azborot portal and examination in the Ministry of Information Technologies and Communications Development according to the established procedure;

- By September 1, 2021, take steps to ensure the creation and monitoring of the software complex of the Central Information Portal of State Procurement, which collects all information on public procurement and provides mutual electronic cooperation with external information systems.

Development of the central information portal and ensuring its monitoring is carried out by the Information and Computing Center of the Ministry of Finance. Development of the central information portal and ensuring its monitoring is carried out at the expense of the funds attracted from international financial institutions and the own funds of the Information and Computing Center of the Ministry of Finance.

From April 1, 2021, information about the founders of the state procurement executive will be included in the register of contracts concluded with state customers using the information exchange between the Ministry of Finance and the DSQ information systems.

The document approved the functional requirements for maintaining the central information portal of State procurement and the rules for maintaining the national classification of goods (works, services) used in the field of State procurement.

In order to create an open and transparent mechanism of public procurement, to improve it, to ensure that trades are conducted in a corruption-free manner, it is necessary to continue the work and measures taken in the

republic, and to eliminate the existing problems in a timely manner.

There are some problems and shortcomings related to the implementation of purchases. For example, if according to Article 44 of the "Law on State Procurement" the contract was not concluded due to the fact that the goods (work, service) are not available in the electronic store at the end of the procurement procedure, the state customer has the right to make a direct purchase by concluding a contract with an independently selected supplier. Due to the fact that not all types of goods are available in the electronic store, the number of direct contracts concluded between customers and product suppliers in a non-competitive manner is increasing.

In order to prevent such situations, the issue of influencing economic development by improving the state procurement system and ensuring the participation of small business entities in state orders is being paid attention to as an important direction in our republic. From this point of view, the study of foreign experiences and the use of these experiences in the state procurement system are important for the development of the activities of entrepreneurship and small business entities operating in our country.

## CONCLUSION

In conclusion, it can be said that effective spending of budget funds is one of the most important issues of every state at any time. Laws and decisions developed on the improvement of the state procurement process are of great

importance in finding a solution to these issues. At the same time, the small amount of fines imposed on suppliers of goods (works, services) for irresponsibility in the implementation of state procurement is causing a number of problems in the delivery of goods (works, services) to customers on time and according to the specified requirements. State support of small businesses and private entrepreneurs, this area continuous and efficient operation of state organizations is ensured by involving the representatives of the state and corporate procurement process.

Based on these, the following proposals and recommendations were developed in relation to the effective organization of financial relations of budget organizations in the implementation of state procurement:

- expanding the list of goods (work, services) entitled to direct contracts;
- to strengthen the responsibility of the participants in the process of public procurement due to irresponsibility;
- study of foreign practice in the wider involvement of business entities in the process of public procurement.

As a result, as a result of the announcement of works and services needed by customers on a special information portal, the offer for these works and services will increase, due to the existence of competition between them, the price of works and services will decrease, as a result, the budget organizations will save money allocated for these works and services.
