ABSTRACT

The article presents ideas about the requirements for a modern teacher and the innovative ideas that are required to be implemented. The advantages of teaching young people in the framework of creative thinking were considered and conclusions were drawn. Explanations and instructions were given on innovations in the education system and their practical application.

Keywords

Pedagogical skills, creative thinking, methodology, innovative fundamentals of teaching, new technologies, innovations in the education system, teacher's work on himself.

INTRODUCTION

High giftedness, innovative method of scientific and pedagogical thinking, creation of new values and willingness to make creative decisions is a new stage of development. With an outdated point of view and an old-fashioned model of worldview, creative thinking categorically contradicts.

A Master is a creator who is constantly looking of non-standard directions human development. In the field of pedagogy, accompanied by attempts to give a child natural knowledge and skills, it is advisable to use the sensitivity as the highest stage of the development of kindness and sensitivity in ballet. The teacher should not stop at his scientific,

spiritual and ideological rise. He showed his way to others, hoping that he is a great man, and he should be modest in the right place. As the first President of the Republic of Uzbekistan Islam Karimov rightly noted in his work "High spirituality is an invincible force", " if we had said that the largest school in the world, the most honorable of professions is teaching and mentoring, I think we would have told the same truth." Indeed, a teacher is a great person whose being brings pleasantness and harm to the classroom, but also brings good to thousands and thousands of young souls. One of the necessary types of activity is the professional activity of a teacher. It has a high social significance, as it provides an exchange of accumulated human experience, helps to introduce children to the values of human culture. The work of a teacher is honorable and demanding. The future of the state largely depends on its actions. The professional pedagogical orientation occupies fragmentary place in the structure of the teacher's personality. These are the main professionally significant personality traits of the created form. The professional orientation of the teacher's personality is characterized, first of all, by an interest in the teaching profession and pedagogical professions. The essence of the pedagogical direction is an interest in the teaching profession, a positive emotional attitude towards children, parents, general pedagogical ability to work and its various types, hope for the acquisition of pedagogical knowledge and skills. The teaching profession, in contrast to the pedagogical interest, is necessary. The essence of the cognitive orientation of the teacher's

personality is spiritual needs and interests. A modern teacher should know the basics of science, the possibilities of solving socioeconomic, industrial and cultural problems. However, this is not enough- he is able to benefit from new searches, new discoveries and prophecies, to see the near and distant future of pedagogical achievements. Thus, pedagogical endurance and individual qualities of a teacher play an important role in the successful realization of professional ability to work, are the key to his professional formation development.

The urgency of the problem of training a highly qualified, competent, active teacher at the present stage with the multiple revival of a person as an internal value is known to everyone. In order to help the coach master new pedagogical thinking, be ready to solve complex problems in the education system, improve his pedagogical skills, specially designed methodological tasks are called upon. A modern teacher should know the basics of science, the possibilities of solving socioeconomic, industrial and cultural problems. But this is not enough - he must be free from new searches, new discoveries and prophecies, and know the near and distant future of pedagogical achievements. The urgency of the problem of training a highly qualified, charismatic, active teacher at the present stage with the multiple revival of a person as an inner value is known to everyone. In order to help the coach master new pedagogical thinking, to be ready to solve complex problems in the education system, he is called specially developed upon to

methodological work to improve his pedagogical skills. The idea of creating a "national training program", which determines the professional readiness, tempered potential and creative abilities of personnel trained for educational institutions, various sectors of the national economy of the Republic of Uzbekistan, became the basis for the creation of a "national training program". This document is a necessary document that reveals the content of the reforms carried out in the education system of the republic. It was noted that the main goal of "harmonious educational innovations is maturation and well-being of a person, the creation of an effective and efficient mechanism for promoting the interests of the individual, changing patterns of thinking and social behavior."In today's developed era. everv teacher, using modern innovations, was aware of the basic issues of raising a child. In particular, a teacher of technological sciences should consult, accompanied by classroom teachers, science teachers, school leaders, psychologists and parents in the professional orientation of their students. In a broad sense, a teacher is a person with knowledge. The teacher carries out activities for the education and upbringing of children or upbringing.Russian scientist V. A. Slastenin by definition. "the social activity of the pedagogical type of ability to work is aimed at transferring from generation to generation the accumulated culture and experience of mankind, creating conditions for their individual development and preparation for performing certain social roles in society"Pedagogical ability to work, like other human activities, can be considered professional

and unprofessional. Pedagogical ability to work is a profession or general education when it is carried out by people who have a professional education. It covers the spheres of existence of human activity.

When a teacher uses information storage in the classroom, students' enthusiasm for the lesson increases. The XXI century is the age of information technology, when the role of the repository in child orientation is becoming increasingly important, the context of the escalation of the situation of awareness in society and education, it is considered high-quality to conduct educational activities with students in the environment modern of digital communication using digital means.teacher requirements are an imperative system of professional qualities that characterize the success of pedagogical performance. Pedagogical giftedness is a solitary property, combined with a tendency to work with children, love children and enjoy meeting them. Often pedagogical abilities require the ability to perform certain actions. For example, speaking beautifully, singing, drawing, arranging children is also different.

The main groups of abilities are distinguished.

- 1. The foundation. They consist of the teacher's other abilities to gather students, occupy them, share responsibilities, see, plan work, and also take into account the work done.
- 2. Didactic. Special skills in the selection and preparation of reading materials, clarity, equipment of reading material, intelligibility, accuracy, expressiveness, reliability and

consistency of transmission, development of cognitive interest and spiritual needs, increase of reading and cognitive activity, etc.

- 3. Perception, manifested in the ability of students to penetrate into the spiritual world, objectively assess their sensory states and determine the characteristics of the psyche.
- 4. Development of the teacher's ability to establish pedagogically adequate ratios of communication skills with students, their parents, colleagues and school leaders.
- 5. Suggestion consists in demonstrating the abilities and emotional and administrative impact on the audience.

The professional orientation of a teacher's personality is determined, first of all, by the teaching profession and interests. The ancestor of the pedagogical direction was an interest in the profession of a teacher who sought to acquire pedagogical knowledge and skills, positively treating the child, the parent, general pedagogical ability to work and its various types. One of the necessary types of activity is the professional activity of a teacher. It has a high social significance, as it provides an exchange of accumulated human experience, helps to introduce children to the values of human culture. The work of a teacher is honorable and demanding. The future of the state largely depends on its actions. Summing up, we can say that every parent, every family, neighborhood, considering today the education and upbringing of our children as a priority task, we undertake to protect young people from negative impressions alien to our people and

harmful to the consciousness of the new generation, to educate the modern generation worthy of showing the world community the progress of the nation and the country. This is due to the fact that a person's life is directly related to morality, upbringing and education.
